

Non-Sustainable Livestock

Forest Management with Integrated Livestock (FMIL)

EbA & REGENERATIVE AGRICULTURE

Deforestation and forest degradation

Connectivity and biodiversity loss

Eroded soil and minimal coverage

Conservation, biodiversity and ecosystem services

Profitable production of livestock products (milk and beef)

Healthy soils and improved coverage

BENEFITS

ECONOMIC / PRODUCTIVE

Sustained productivity of forest resources

Increase in forage productivity per hectare

Animal welfare: reduces caloric stress, increasing the reproduction rate of cattle and milk production

SOCIAL

Improves social welfare, avoiding migration to other areas

Improves the value of products and secures local development

ENVIRONMENTAL

Ecosystem recovery after extreme climatic impacts

Conservation of functional corridors, biodiversity and ecosystem heterogeneity
